polynucleotides and polypeptides used of receptor activity. The cDNA encodes the human histamine H3 receptor. The polypeptide Novel human histamine H3 receptor in methods to identify modulators Claim 2; Fig 2; 54pp; English.

contains the seven conserved hydrophobic domains and specific residues conserved in biogenic amine receptors. The human histamine H3 receptor polynucleotides and polypeptides are used in methods to screen for modulators of receptor activity (claimed). Such agonists and antagonists may prove useful as research tools or may be used as therapeutics to treat disorders directly or indirectly involving histamine receptors (claimed). The characterization of the polynucleotide is useful for forensic analysis, diagnostic applications, and epidemiological studies

are agonists of recombinant human histemine H3 receptor protein activity, comprising combining a compound suspected of being an antagonist of human histamine H3 receptor protein activity with recombinant human histamine H3 receptor protein, and measuring an agonistic effect of the compound on the recombinant human histamine H3 receptor protein. The methods and compositions of the present invention are useful for diagnosing and treating human histamine H3 receptor-related disorders, such as central and peripheral nervous system disorders (depression, anxiety, psychoses, Parkinson's disease, Alzheimer's disease, dementia and tardive dyskinesia), asthma, allergy, diabetes mellitus, inflammation, immune, cardiovascular (hypertension, and arrhythmia) and gastrointestinal disorders. The present sequence is the coding sequence of the human histamine H3 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                      The invention relates to a monospecific antibody immunologically reactive with a protein appearing as ADD22854, where the protein functions as a human histamine H3 receptor. The antibody blocks intracellular signaling cativity of the human histamine H3 receptors in response to ligand binding. The antibody is useful for detecting and quantifying expression of human histamine H3 receptors, which may be useful for diagnostic, of human histamine H3 receptors, which may be useful for diagnostic, of human histamine H3 receptors, which may be useful for diagnostic, of pideniological or forensic purposes. The antibody is potentially useful in treating diseases such as depression, anxiety, schizophrenia, Parkinson's disease, obesity, hypertension, Tourette's syndrome, sexual Alzheimer's disease, obsesity, hypertension, Tourette's syndrome, sexual Alzheimer's disease, obsesity, hypertension, Tourette's syndrome, sexual cating disorders and anorexia, cardiovascular and cerebrovascular cating disorders, diabetes, constipation, arrhythmia, ulcers, asthma, allergy, inflammation, or prostate dysfunction. The present sequence is the open cading frame encoding the histamine H3 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a human histamine H3 receptor protein and nucleic acid encoding such protein. The invention is useful for identifying compounds that modulate the activity of human histamine H3 receptor. The invention is useful for treating a condition that is mediated by a human histamine H3 receptor in a patient and for treating extrinency discasse, obseity, Alzheimer's disease, pain, stress, ulcers, constipation and non-insulin dependent diabetes mellitus. The present sequence is a human histamine H3 receptor CDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The cDNA encodes the human histamine H3 receptor. The polypeptide contains the seven conserved hydrophobic domains and specific residues conserved in biogenic amine receptors. The human histamine H3 receptor polymucleorides and polypeptides are used in methods to screen for modulators of receptor activity (claimed). Such agonists and antagonists may prove useful as research tools or may be used as therapeutics to treat disorders directly or indirectly involving histamine receptors (claimed). The characterization of the polymucleotide is useful for forensic analysis, diagnostic applications, and epidemiological studies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel human histamine H3 receptor polynucleotides and polypeptides used in methods to identify modulators of receptor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GCGGCGGCGGGCGCGCGCGCTTCTCGGCAGCCTGGACCGCGGTGCTGGCCGCGCTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents the complete sequence of cDNA encoding a human histamine H3 receptor. The histamine H3 receptor DNA molecules are useful for isolating homologues of receptor, identifying and isolating genomic equivalents of receptor, and identifying, detecting or isolating mutant forms of the receptor. The DNA molecules are also useful in gene therapy for the treatment of inflammation or allergies. The human histamine H3 receptor protein is useful in identifying modulators of the human histamine H3 receptor, which in turn are useful as therapeutic and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of cDNA clone pH3R coding for human histamine H3 receptor, a novel G-protein coupled receptor. The clone was isolated from a human thalamus cDNA library using a histamine H3 receptor cDNA has been expressed in recombinant host cells, which produced active recombinant protein. H3 receptor nucleic acids and proteins can be used to identify modulators of H3 receptor acids and proteins can be used to identify modulators of H3 receptor acids and proteins can be used to identify modulators of H3 receptor cativity or expression, useful as therapeutic or diagnostic agents for central nervous system disorders, such as depression, anxiety, psychoses (e.g. schizophrenia), tardive dyskinesia, Parkinson's disease, obesity, hypertension, Towrette's syndrome, sexual dysfunction, drug addiction, drug abuse, cognitive disorders, Alzheimer's disease, senile dementia, obsessive-compulsive behaviour, panic attacks, pain, social phobias, eating disorders and anorexia, cardiovascular and cerebrovascular stand spasticity, as well as acid secretion, ulcers, airway constriction, asthma, allergy, inflammation and prostate dysfunction. Histemanic H3 receptor DNA molecules are also useful for isolating related sequences, identifying and isolating genomic equivalents, identifying or isolating genomic genivalents, identifying or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell

regeneration-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosolerosis, bacterial, fungal, processan or viral infections, osteoparterial, fungal, processan or viral infections, osteoparthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42569 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      839 AGCTCCATCCCCGAGGGCCACTGCTATGCCGAGTTCTTCTACAACTGGTACTTCCTCATC

The present invention relates to a method of identifying compounds that are agonists of recombinant human histamine H3 receptor protein activity, comprising compound suspected of being an antagonist of human histamine H3 receptor protein activity with recombinant human histamine H3 receptor protein, and measuring an agonistic effect of the compound on the recombinant human histamine H3 receptor protein. The methods and compositions of the present invention are useful for diagnosing and treating human histamine H3 receptor-related disorders, such as central and peripheral nervous system disorders (depression, anxiety, psychoses, Parkinson's disease, Alzheimer's disease, dementia and tardive dyskinesia), asthma, allergy, diabetes mellitus, inflammation, immune, cardiovascular (hypertension, and arrhythmia) and gastroincestinal histamine H3 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GCCGACTCGAGCCTCCGCACCCCAGAACAACTTCTTCCTGCTCAACCTCGCCCATCTCCGAC

The invention relates to a monospecific antibody immunologically reactive with a protein appearing as ADD22854, where the protein functions as a human histamine H3 receptor. The antibody blocks intracellular signaling cativity of the human histamine H3 receptors in response to ligand binding. The antibody is useful for detecting and quantifying expression of human histamine H3 receptors, which may be useful for disquestic, epidemiological or forensic purposes. The antibody is potentially useful in treating diseases such as depression, anxiety, schizophrenia, Parkinson's disease, obesity, hypertension, Tourette's syndrome, sexual cation, drug addiction or drug abuse, cognitive disorders, alzheimer's disease, obsessive-compulsive behaviour, panic attacks, pain, eating disorders and anorexia, cardiovascular and cerebrovascular cation disorders, diabetes, constipation, arrhythmia, ulcers, asthma, allergy, inflammation, or prostate dysfunction. The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder. Or treating a subject having a urological disorder. Also described: (1) a method for identifying a subject having a urological disorder; (2) a method for identifying a subject having a urological disorder; and (3) a method for treating a subject having a urological disorder; and (3) a method for treating a subject having a urological disorder. The compound has urological disorder sare useful for identifying a polypeptides related to urological disorder; identifying a subject having a urological disorder. Disorder include urinary incontinence and benign prostatic disorder include urinary incontinence and benign prostatic related protein, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ATGGCGCTGCTCATCGTGGCCACGGTGCTGGGCAACGCGCTGGTCATGCTCGCCTTCGTG 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a human histamine H3 receptor protein and uncleic acid encoding such protein. The invention is useful for feathfying compounds that modulate the activity of human histamine H3 receptor. The invention is useful for treating a condition that is mediated by a human histamine H3 receptor in a patient and for treating Parkinson's disease, obesity, Alzheimer's disease, pain, stress, ulcers, constipation and non-insulin dependent diabetes mellitus. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids
                                                           <u>¢GGGCCGCCTGCCATGGCCACTGCGTCCCTACTGGTACGAAACCTCCTTCTGGCTC</u>
                                                                                                                         CGGGCCTTCACCAAGCTGCTCTGCCCCCAGAAGCTCAAAATCCAGCCCCACAGCTCCCTG
                                                                                                                                                                               CGGGCCTTCACCAAGCTGCTCTCCCCCCAGAAGCTCAAAATCCAGCCCCACAGCTCCCTG
                                                                                                  Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Li F;

cof the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases, a transgenic computation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgene or in an endogenous GPCR gene; cells derived comtation in a different GPCR gene of the invention; and kits comprising a nutation in a different GPCR gene of the invention. The probes which hybridise to GPCR polynucleotides of the invention. The comprising a GPCR mucleic acid. The GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, disease, distease or schizophrenia); chapteric neuropathy, Parkinson's disease or schizophrenia); disorders of the adrenal gland; disorders of the colon or intestine (e.g., crohn's disease, diarrhoea, food poisoning or irritable bowel cyndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders (e.g., autoimmune disorders or ADS); bone and joint disorders (e.g., autoimmune disorders or corteoporosis); metabolic or nutritive disorders or athritis, gout or osteoporosis; metabolic or nutritive disorders or chapters (e.g., cancers); and disorders of the kidney, liver, lung, breast, ovary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCR-encoding mucleic acid of the invention. Note: The full sequence data for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      those sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            patent did not form part of the printed specification; those second shown were obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                             This sequence encodes the human guanosine triphosphate binding protein (G-protein) conjugate-type receptor protein (designated BG2) of the invention. BG2 is a member of the G-protein conjugate-type receptor superfamily and shows significant homology to other muscarinic acetylcholine receptors. BG2 can be used in a screening method for identifying ligands binding to the BG2 receptor and for compounds which are agonists or antagonists to the binding of ligands to BG2 receptor, and which can be used for the regulation of signal transduction, and thus for the prevention and treatment of memory and learning difficulties and disorders of the control of physiological functions such as blood pressure, digestion and sleep
